A — Heatmap of RMSE as a function of Species Count (x-axis) versus Species Count (y-axis), with a dashed diagonal line. A green square with a green star is located near (20, 25) and a blue square with a blue star is located near (25, 10).

B — R = [20, 25]; Control Input as a function of Species Count vs Species Count.

C — Score = 96; Probability distribution of Species Count vs Species Count with marginal histograms.

D — R = [25, 10]; Control Input as a function of Species Count vs Species Count.

E — Score = 64; Probability distribution of Species Count vs Species Count with marginal histograms.
